

COIT20265 Assessment item – 2

Individual Progress Report

Due date:

- Progress Report 1 (12.5%) due Friday week 6
- Progress Report 2 (12.5%) due Monday week 9

ASSESSMENT

Weighting: 25% is split into two (2) deliverables

2

1. Overview

Assessment 2 (25%) consists of two individual progress reports submitted during the project to demonstrate your engagement, technical development, and professional contribution. The assessment is divided into Progress Report 1 (12.5%) due in Week 6 and Progress Report 2 (12.5%) due in Week 9. In each report, you must provide clear and verifiable evidence of the work you have completed in accordance with the responsibilities assigned to you in the approved Project Proposal.

2. Assessment task

This assessment 2 (25%) is split into two (2) deliverables:

- Progress Report 1 (12.5%) due in week 6
- Progress Report 2 (12.5%) due in week 9

Assessment 2 requires you to submit an individual Progress Report that demonstrates your contributions and development throughout the project. The purpose of this task is to monitor your engagement, technical progress, and professional participation before submission of the final report. In this report, you must provide clear and verifiable evidence of the work you have completed in alignment with the responsibilities assigned to you in the approved Project Proposal.

Evidence may include GitHub commit history, Jira or Trello task logs, modelling artefacts, updated requirements documentation, design specifications, prototype components, meeting action items, or other approved project management tools. The evidence must clearly identify your individual contribution and demonstrate measurable progress.

You must also demonstrate substantial advancement in requirements development, analysis, and design activities relevant to your role in the project. The submission should show refinement and evolution of artefacts rather than repetition of earlier drafts. In addition, you are required to provide a reflective self-assessment outlining tasks completed, challenges encountered, problem-solving strategies used, time management, contribution to team collaboration, and areas for improvement. The reflection should demonstrate accountability and professional growth. Attendance and meaningful participation in scheduled mentor meetings are expected throughout

the term. Evidence of engagement, including meeting discussions and assigned action items, may be considered when evaluating your progress. There is no fixed template for reporting progress as part of this assignment. You can create your own progress report format as long as it meets the marking criteria given below and formal reporting style like cover page, page numbers and clearly labelled content.

AI Assessment Scale - AI Collaboration

You may use AI to assist with specific tasks such as drafting text, refining and evaluating your work. You must critically evaluate and modify any AI-generated content you use.

IMPORTANT NOTE

This assessment is exempt from the 72-hour submission grace period and must be submitted by the stated due date and time. Please refer to Moodle for detailed marking criteria and submission instructions.

3. Assessment submission

You must submit your Progress Report individually via the unit Moodle site by the specified due dates for each report. The report should be submitted as a single document that clearly presents your individual contributions, supporting evidence, and reflective self-assessment. Any supporting materials such as screenshots of GitHub commits, task management logs (e.g., Jira or Trello), modelling artefacts, design documents, or other relevant project evidence should be included within the document. It is your responsibility to ensure that the submission is complete, clearly organised, and uploaded before the deadline. Late submissions may incur penalties in accordance with the university's assessment policies.

4. Assessment Criteria (12.5%)

Assessment Criteria- Project Progress

1. Evidence of Individual Contribution (3.5%)

- Clear alignment between completed tasks and those allocated in the Project Proposal
- Strong, verifiable evidence provided (e.g., GitHub commits, Jira logs, modelling artefacts, documentation updates)
- Demonstration of measurable and meaningful progress
- Clear distinction of individual work

2. Progress in Achieving Project Goals (3%)

- Demonstrated advancement in requirements development
- Refinement of documentation and models
- Logical progression toward final deliverables
- Technical accuracy and depth

3. Reflection and Professional Accountability (3%)

- Critical self-assessment
- Identification of challenges and problem-solving approaches
- Evidence of learning and improvement
- Clear action plan for the remaining project work

4. Minimum Engagement and Professional Conduct (3%)

- Attendance and weekly progress updates are required via the online system or in a meeting
- Demonstrated understanding of assigned responsibilities
- Professional communication and structured presentation of the report
